- In the folder 00_input_knime there are 2 files with extension csv. They are input files in the knime workflow (Workflow_Search_Hypotheses.knwf).

- In the 01_test folder there are the files resulting from the knime workflow, as well as 3 scripts in bash format and files with extension inp and def that will be used for the next step.
  - NOTE: To execute each of the scripts you must modify the path where you run the workflow, in this case it was executed in a folder called 01_test that was in the home of the user pvalenzuela (/home/pvalenzuela/01_test).

- In the folder 02_Result you will find the results obtained when executing the scripts of the previous step and you can download them from the link https://drive.google.com/drive/folders/1m4e-7gfALMZ-5eSXHzNM1rwCol9flBeH?usp=sharing.
